

1- Create an array whose type is int and which has 6 elements. The values of each element of the array will be inserted by the user. Then your program will print the numbers in ascending order.

**Output Screen:**

```
Enter 6 integer numbers:
5 2 6 4 9 1
-----
List of the numbers in ascending order:
1 2 4 5 6 9
Press any key to continue_
```

2- In your program, you will write a function shiftleft which shifts the given string n elements left.

Function prototype will be as the following:

```
void shiftleft(char str[ ], int n)
```

**Output Screen:**

```
Enter the text
Hello
How many characters do you want to shift left:
3
loHel
Press any key to continue_
```
